Intro

Since the invention of blockchain technology a decade ago, cryptocurrencies and their applications have been amongst the most talked about topics in the tech and finance industries. Despite some of the prominent coins suffering slumps such as the 2017 fever pitch, investors in the crypto industry have continued to follow developments in the industry keenly.

This attention has not only seen most cryptocurrencies gain unprecedented value in the past year but has also influenced the number of participants in the crypto industry to grow by 188 percent between 2018 and 2020. Although the crypto industry is growing relatively fast, most crypto platforms have various weaknesses. For instance, most platforms charge exorbitant transaction fees, are prone to delays, and are too complex for conventional users.

This limits the number of people adopting the technology. Besides, a majority of crypto platforms in the market are solely designed to enable users to trade virtual assets; they do not incorporate social responsibilities such as supporting initiatives to conserve the environment or helping the disadvantaged in our society.

But what if there was a cryptocurrency payment solution that could sustain itself regardless. There are many reasons why this is possible but I will focus on just two: how people use payments and how easy payments are made.

Smars Token intends to address these weaknesses by providing a comprehensive virtual assets in a marketplace that is socially responsible.

Why Smars

About Us

Smars Games is a gaming company currently working on developing a space game that provides an immersive interstellar experience to the player base.

We plans on sustaining the growth of its crypto token and NFT collection by providing traffic and support through gaming projects. These digital assets would be linked with our space game, where players could easily use or trade these assets to advance their progress in the game.

Smars Token is a fully automated decentralized cryptocurrency platform designed with the needs of modern crypto enthusiasts at its core.

The platform intends to disrupt the crypto industry by offering a platform that addresses virtually all weaknesses in the contemporary crypto platform. To achieve this, the platform leverages a mix of cutting edge technologies and innovative techniques backed up by best practices in the crypto industry.

Smars Games will feature one of the best transaction rates in the industry, will be immune to transaction delays, and its user interface will be friendly to all types of users. Besides providing crypto trading capabilities, this platform will feature an NFT platform where all characters in affiliate games will be sold.

Our Mission

Is offering donations to less privileged homes, and feeding one million hungry children in Asia & Africa, because I remember being one of them and also sharing its profits with its token holders.

*The Smars platform is about supporting
and helping the disadvantaged in our society.
And building a safe and great crypto community.*

The Bigger Picture

We rise by lifting others

Good Tokenomics The more smars you hold, the more you will receive for each BSC transaction involving smars. You get richer simply by holding smars tokens and also indirectly putting food in the mouth of poor Asians & African children.

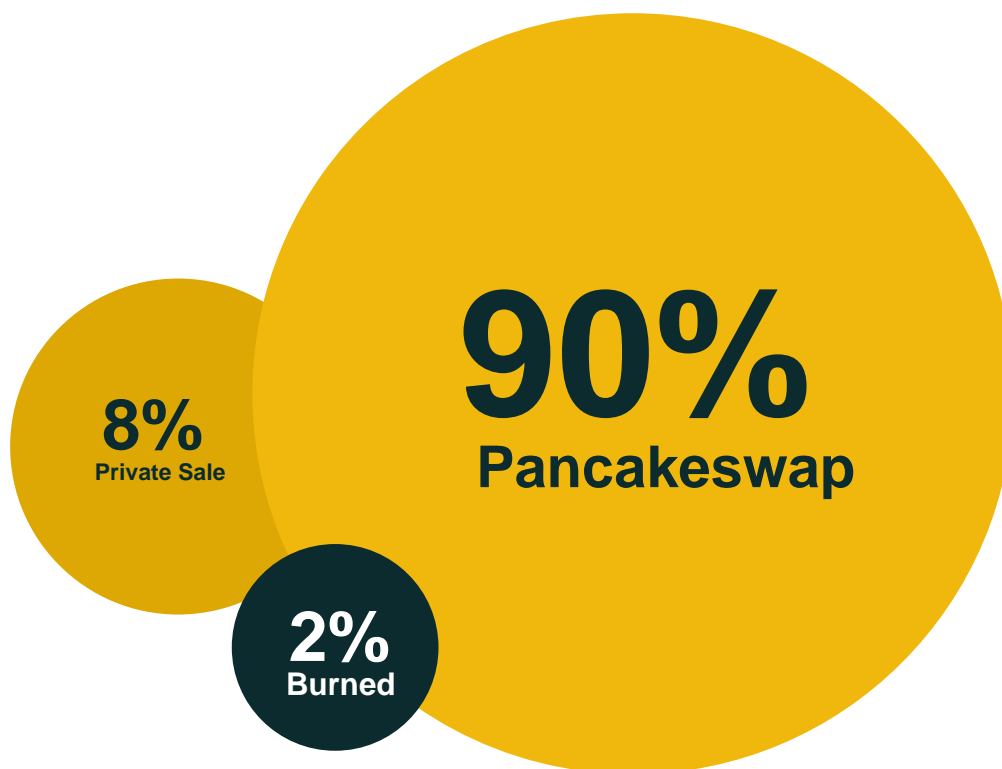

To fulfill our social responsibilities, part of the platform's proceeds will be directed to a charity wallet. The charity wallet will be used to support disadvantaged families and underprivileged children in Africa and Asia. Smars Games is an ultramodern cryptocurrency platform that intends to enable its users to earn by sharing part of the transaction fee with them.

Smars Games will also participate in philanthropic activities by helping struggling families and children in Asia and Africa. In other words, Smars Games is not just a cryptocurrency platform; it is also a medium of supporting the less fortunate in society.

Tokenomics

There will be 10,000,000,000 tokens minted. Distribution of supply will occur in multiple phases. Allocation is as follows:

Total Supply: 10,000,000,000

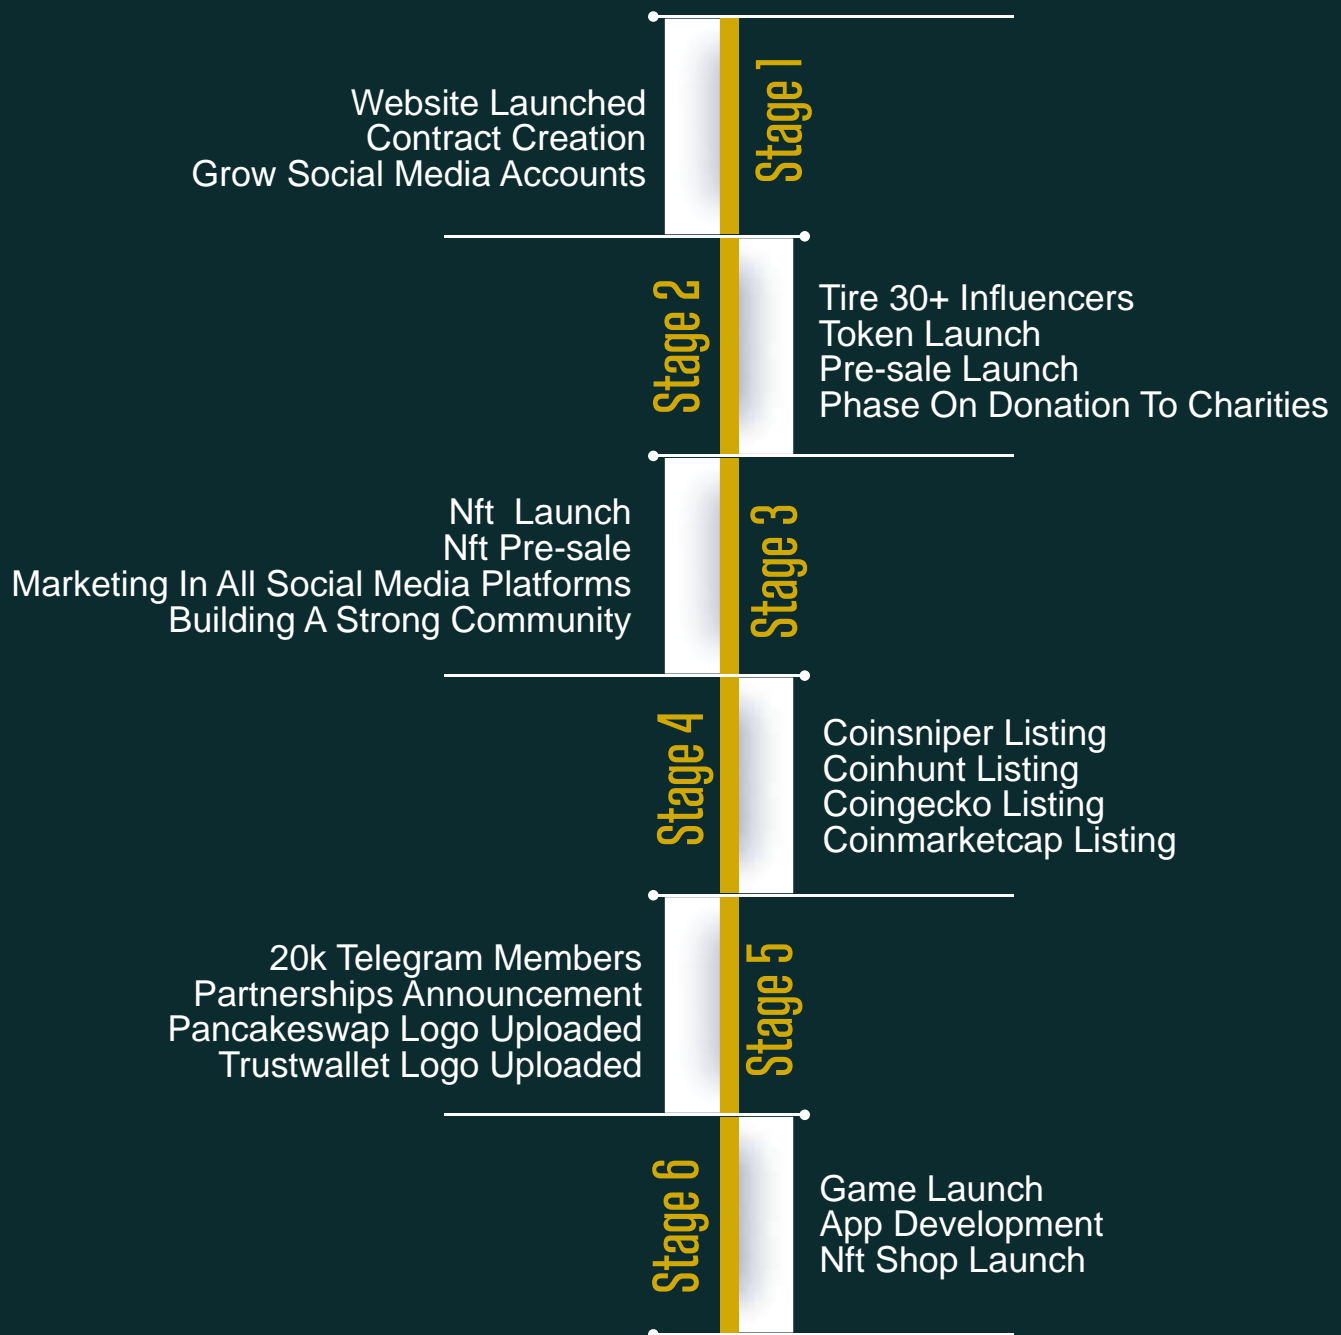

Please Note:

Any tokens that aren't sold out in the private sale will be burned.
